

LA Series Lever Hoist

February 15, 2020

Nameplate upgrade includes all OSHA required warnings on a stainless-steel metal nameplate attached to the handle. The nameplates are more durable and long lasting, and the required warnings are not subject to loss or removal of hang tags. Make sure you are in compliance for any OSHA inspections!

3/4 to 10 US Ton Capacity

Super Duty Friction Material, 1-piece fused brake disc.

New Super Duty friction material made from sintered metal like in heavy duty earth moving equipment clutches will not absorb moisture, crack or shatter. The super duty friction material provides a more robust and durable performance.

All LA series lever hoists have zinc plated grade 80 load chain manufactured in the USA.

Robust steel construction is light weight and more durable than cast aluminum design products.

Optional Overload Protection designed with a one directional clutch that will only slip in the lift direction.

Self-adjusting double pawl disc type mechanical load brake insures control.

Available from distribution and four regional stocking warehouses for quick shipment and product support.

Meets: ASME/ANSI B30.21. OSHA. NASA-STD-8719.9.
